PROJECTS

Name : **Restoration and replenishment of tributaries of Vishwamitri river**
During : **7th and 8th semester**
Applocation : **RIVER RESTORATION**
Summary :

The filter is used to restore and rehabilitate tributaries of any river by filtering waste water coming from upstream side of a tributary and discharging treated water to the river. Filter is designed that it can operate itself or can be operated manually under the supervision of single operator. The filter also designed keeping in mind flooding conditions and its relative measures are manipulated by micro-controller. In high flood condition, filter will get lifted so that it does not become an obstruction to the flood flow and surrounded area will not be affected. This type of portable filter can be for any tributary of river to reduce overall polution load of river.

TRAINING/INTERNSHIP
